LUMP BREAKER

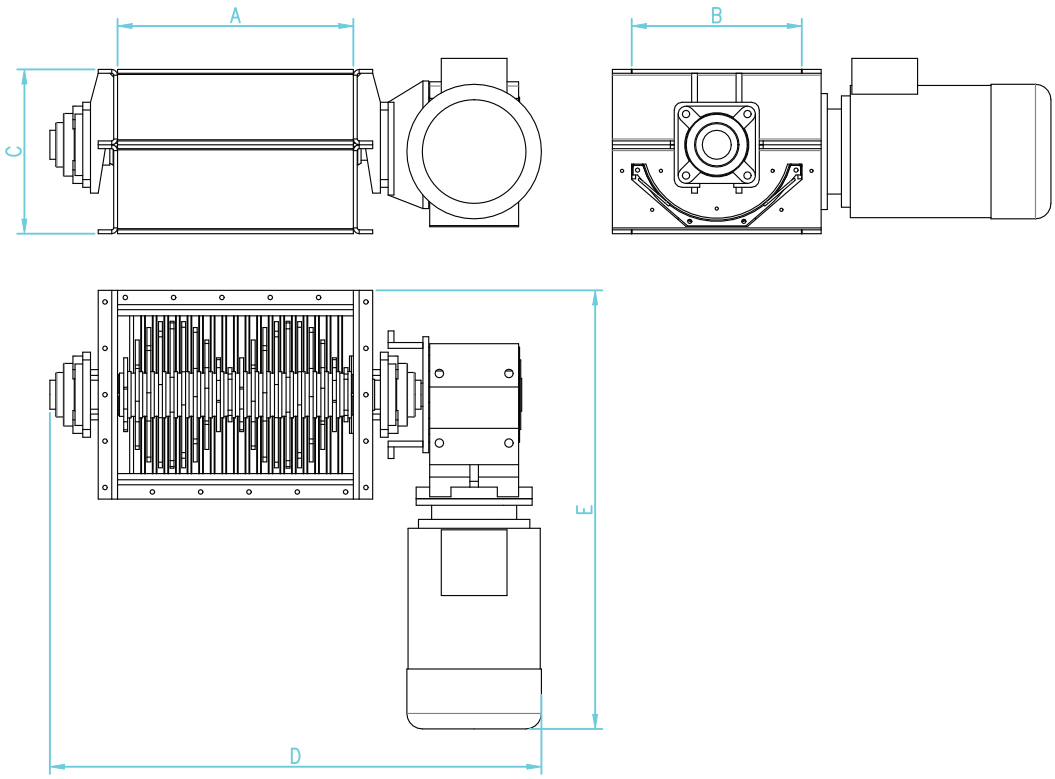
It brings the raw materials that are likely to be lumps during the process into standard sizes before entering the process. The rotor, which is made of hammer shaped shafts, has a self – cleaning feature. The sieve at the exit of the lump breaker reduces the lump size to the desired size. The robust body structure and rotor, can be manufactured from carbon steel or stainless steel.

USAGE AREAS

- Compound feed mills
- Chemical plants



MODEL	DIMENSIONS(mm)					MOTOR	CAPACITY (m^3/h)
	A	B	C	D	E	(kW)	
SSB 400x600	610	440	425	1270	1135	11-22	48
